Dear Science Educator:

I have reviewed the BOOMERS Science Curriculum and have found it to be of good quality and of sound educational value.

Designed and written by Broward County Science teachers, these materials have withstood the test of time and have been utilized to improve student understanding of physical concepts.

The recent emphasis on FCAT performance has made these types of opportunities essential in the "hands-on" process of concept building. I encourage these types of activities for all students.

Please consider these field trip activities as a viable resource for science instruction. Be aware that certain restrictions apply to this special offer for science teachers and that BOOMERS reserves the right to establish restrictions on their pricing package. Please inquire.

Sincerely,

J.P. Keener
Science Curriculum Specialist
