

Message to Parents and Teachers

As part of Boomers! On-going effort to support local education, we are proud to announce our new and improved Educational Workshop that includes activities which allow students to apply what they learn in the classroom to practical everyday experiences. These activities tie the lessons in the classroom to Boomers! activities and attractions.

Boomers! Educational Workshop gives students defined parameters featuring a wide range of activities focusing on math and science. This workbook also allows students to be active learners and gain a better understanding of various subjects traditionally taught in the classroom through actual "hands-on" experiences.

The Boomers! Educational Workshop and Key is provided to be used in the classroom taking approximately one class period to prepare for the visit and one class period to review and complete the package afterwards. On the day of the scheduled trip to Boomers, the students will receive **(2) two rides on the Go-Karts, Bumper Boats, Roller Coaster, Laser Tag, and UNLIMITED Mini- Golf as well as an Educational Demonstration on the Roller Coaster** and only available Monday through Friday.

We hope that the Educational Workshop will be a huge success and that your students will see applications of science in the world around them. Boomers! Is committed to making learning fun . . . join us!
